

COLOR CODED BEZELS

SPAN's new NFPA Colored Bezels match the color coded nameplates and T-handles for the ultimate in safety and quick identification of the correct pump circuit. They are less costly than metal decorative gauge plates and offer superior visibility of color for maximum safety at the pump panel.

The color coded bezels can be added to any FA-Series gauge. (Screw Off/Screw On). No need to stock gauges in multiple colors to achieve a custom instrument panel appearance. The solid molded color bezel will not chip, scratch or fade.
